DIAGNOSTIC — not yet independently accepted
Inhibitory-gain reduction in a Jansen–Rit cortical column
A EEG proxy: first paired initial state
Demeaned cortical proxy (mV)
Time (s)
100% inhibition gain
75% inhibition gain
50% inhibition gain
25% inhibition gain
B Saved Welch PSD (quiet peaks undefined)
Power spectral density (mV²/Hz)
Frequency (Hz)
C All 8 paired initial states; black = median
Retained RMS (mV)
Oscillation floor
Retained inhibition gain
D Full-grid half-step RMS check
RMS error / allowed tolerance
Acceptance bound
Retained inhibition gain
